WO 01/49199 A2 Straumann Holding AG July 12, 2001

WO 01/49199 A2 discloses an intraosteal dental implant structure comprising an implant and an abutment or a mesial structure mounted on the implant, with an anatomically suitable conformation for aesthetic restoration, in particular, in the front teeth region. The implant comprises an additive or non-additive surface structure to favour osteal integration, which extends over the shank section, as far as the structure boundary (10) on the neck of the implant (11). The structure boundary falls anteriorly in the apical direction to a low point and rises, on the proximal implant edge, to a high point (112). The shoulder of the implant (12) is anatomically formed such that, on the proximal side surfaces, raised regions (120) exist and, on each of the anterior and posterior implant edges, recessed regions (121) exist.

Attached is a completed form PTO/SB/08A and form PTO/SB/08B listing these references. Copies of the above noted references are attached hereto.
